

ONCOAI SCREENING REPORT

Date and Time: June 01, 2026 08:34 AM

Analysis ID: 0d0b0750a8d349a5b74d74942711763b

AI Screening Result	Malignant Pattern Detected
Level of Concern	Moderate Concern
Malignancy Probability	51.5%

Screening Result

Assessment: Malignant Pattern Detected

Level of Concern: Moderate Concern

Malignant Probability	51.5%
Benign Probability	48.5%

What the AI Observed

The uploaded image contains tissue patterns that are similar to samples previously identified as malignant during model training.

Areas Reviewed by the AI

The highlighted regions indicate image areas that had the greatest influence on the AI assessment.

What This Means

The highlighted regions indicate image areas that had the greatest influence on the AI assessment.

Recommended Next Steps

- Seek medical consultation promptly
- Consider additional clinical evaluation

- Discuss findings with a qualified healthcare professional

Important Notice

This system is an AI-assisted screening tool designed for educational and research purposes. Results are generated through image pattern analysis and should not be considered a medical interpretation. Always consult a qualified healthcare professional for clinical evaluation and treatment decisions.

Technical Appendix

Model Architecture	EfficientNet-B0 + Random Forest
Explainability	SmoothGradCAM++ with Grad-CAM fallback
Prediction Breakdown	Benign: 48.5% Malignant: 51.5%
Risk Assessment Method	Malignant probability is mapped to the risk categories used in the report. Current level of
Dataset Information	The model was trained on a binary breast tissue dataset prepared from labeled benign and

This appendix is intended for researchers, recruiters, and technical reviewers who want a quick view of the model setup and explanation method.
